*Sauromatum nangkarense* A. Nangkar & H. Tag (2018) was described from Kimin, Papum Pare District of Arunachal Pradesh, India. In the protologue, the authors made a comparison of the morphological characters of this new species with *Sauromatum brevipes* (Hook.f.) N.E.Br.,

*S. hirsutum* (S. Y. Hu) Cusimano & Hett. and *S. meghalayense* D. K. Roy, Talukdar, B. K. Sinha & Dutta Choud. However, a critical study comparing type specimen, protogues and illustrations of *S. meghalayense* with those of *S. nangkarense* reveals that there are no significant differences between the two taxa in morphological characters. As for *S. meghalayense*, since it was published, the species has been accepted by all later authors (Odyuo & al., 2016; Govaerts 2018). Hence, *S. nangkarense* A. Nangkar & H. Tag is reduced to a new synonym to *S. meghalayense* D. K. Roy, Talukdar, B. K. Sinha & Dutta Choud.

***Sauromatum meghalayense*** D. K. Roy, Talukdar, B. K. Sinha & Dutta Choud., NeBIO 5(3): 1-3. 2014.

**Type:** India, Meghalaya, South Garo Hills district, Hatisia, 05.06.2014, DK Roy 130216 (Holo: ASSAM!).

*Sauromatum nangkarense* A. Nangkar & H. Tag, Pleione 12(1): 87-93. 2018. syn. nov.

**Type:** India, Arunachal Pradesh, Papum Pare District, Kemin, 28.04.2015, A Nangkar & H Tag 055 (Holo: ASSAM; Para: HAU).

**Distribution:** India: Meghalaya (South Garo Hills), Arunachal Pradesh (Papum Pare District). Endemic.

**Flowering and Fruiting:** March – September.

**Habitat:** Grows in tropical evergreen broadleaved forest floor, secondary degraded forest, open wet area, grassland and in the barren jhum-land, at an altitudinal range of 150-400 m.
