

# *Preface*

**D**igital Revolution which marks the beginning of Information age is essentially the shift from mechanical and analogue electronic technology to digital electronics. This technological progress has been characterized by new innovations to increase productivity and work efficiency. It rewrites culture, society, methods of research. It is believed that Digital revolution will eventually result in digital cities and societies. The primary objective of this conference therefore is to generate and disseminate new ideas in the domain of Digital Revolution and discern its role in making New India.

This Conference Proceedings contains the written versions of most of the contributions presented during the National Conference on Digital Revolution and New India. The Conference provided a conducive forum for discussing current developments in myriad subjects including Digital Environment, Digital Transformation, Digital Empowerment of citizens, Green IT, E-Learning and the like, among representatives of educational institutions and research scholars working in areas related to the conference theme.

We would like to thank all participants for their contributions to the Conference as well as to the proceedings.

Happy Reading.
