

NATHANIEL WALLICH'S COLLECTION OF PTERIDOPHYTES  
IN CENTRAL NATIONAL HERBARIUM (CAL)

S.K. BASU AND SOVA RUDRA

*Botanical Survey of India, Cryptogamic Section, Howrah 711 103*

ABSTRACT

In the present paper 267 sheets of Pteridophytes in Wallich's collection at CAL have been enumerated with the names as they appear in Wallich's numerical list, the names under which these specimens were cited in Beddomes work and present status of these species.

INTRODUCTION

Nathaniel Wallich (1786-1854) born in Copenhagen, Denmark, was a student of Professor Martin Vahl. Wallich came to India as a Surgeon attached to the Danish settlement at Serampore in Bengal in 1807. He served as Superintendent of the Royal Botanic Garden, Calcutta (now A.J.C. Bose Indian Botanic Garden, Howrah) first in 1815 on temporary basis and then from 1817 till 1846 on permanent basis. He went on leave from 1828 to 1832 and again from 1842 to 1845 to London on account of his failing health. Dr. Wallich expired in London in 1854 at the age of 68 years.

Wallich was a man of great energy and traveled widely in India and neighbouring countries. In between his appointment in the Calcutta Garden and his return to Europe, in 1828, he had ample opportunity for carrying out investigations on the Indian flora. The important collection of mostly tropical Asian material was assembled by Wallich and his collaborators between 1815 and 1846. Wallich sorted out these collection into several sets and distributed them to important herbaria of the world. The main part was brought to London by Wallich in 1828 and the best set was presented to the Linnean Society in 1832, before Wallich's return to India. In 1913 the Wallich herbarium was transferred to Royal Botanic Garden, Kew, U.K. It has about 9000 species belonging to Pteridophytes, Gymnosperms and Angiosperms under 20,500 'numbers' arranged in the same sequence as the accompanying copy of the numerical list, known as "Wallich Catalogue". Although Wallich's Numerical List (or Catalogue) is regarded as effectively published, new Wallich names appeared in it are *nomina nuda*. New combinations, where a basionym is cited or inferred, are however, validly published. Wallich validly published some of his new species in 'Plantae Asiaticae Rariores' (1829-1832). Most of his names were validated by other workers. Since many prominent 19th Century botanists worked on the collections, this herbarium is rich in type material, and it is therefore, of great significance taxonomically as well as historically.

A duplicate set of Wallichian Collections is available in Central National Herbarium (CAL), which was sent between 1853-1859. A copy of the lithographed numerical list (or catalogue) is also available in CAL. The Pteridophytic elements representing 267 sheets from the Wallichian herbarium available in CAL are preserved in the Cryptogamic section, Central National Herbarium.

In the present work 267 sheets of Pteridophytes listed by Wallich are enumerated in a tabular form. In the second column of the table, the specimens presents the Wall. list no. as suggested by Majumdar and Banerjee (1976), followed by the collectors name, locality and date of collection. The names as they appear in the numerical list are given in the third column. The fourth column mentions the names (with corresponding page) under which the Wallichian specimens are cited in "Ferns of British India, Ceylon and the Malay

Peninsula" & Supplement by R.H. Beddome (1883, 1892). The fifth column gives the present status of the species and in the last column the family name is given.

To ascertain the present status of the species, *Index Filicum and supplementum* (Christensen, 1906, 1913), *Companion to Beddome's Handbook to the Ferns of British India, Ceylon and Malay Peninsula* (Nayar & Kaur, 1974) and *A review of the ferns of Northern India* (Clarke, 1880) were consulted.

#### ACKNOWLEDGEMENTS

We wish our sincere thanks and gratitude to the Director, Botanical Survey of India, for facilities. Thanks are also due to Dr. Jagdish Lal, Deputy Director, for guidance and encouragement and to the members of Cryptogamic Unit, for their help rendered during the present work.

#### केन्द्रीय राष्ट्रीय पादपालय में नथानियल वालिच का पर्णाग संग्रह

एस. के. बासु व शोभा रुद्र

आलेख में केन्द्रीय राष्ट्रीय पादपालय, कोलकता में पर्णागों के 267 संग्रहीत फलकों के वर्तमान प्रचलित नाम के साथ वालिच संख्या सूची में प्रभावित नाम एवं बेडोम के कार्य में उल्लेखित नामों का संकलन तालिका रूप में किया गया है।
