Abstract

The Scientists in all over the world are searching the root particle responsible for the outcome of whole universe. Big-bang theory is unable to provide convincing answer. The fact is that the real source of all the elements (atoms) in the whole universe is not in the particle form at all. According to Hindu mythology, the whole universe is made up of 5 Tatva out of which Ganesh Tatva and Shakti Tatva are not in the particle stage. God is nothing but the combination of all the five original Tatva doing its work of Generation. That is why there is a saying that God resides in each and every particle of the universe.

Keywords: Creation, life, universe, God

The Scientists in all over the world are searching the root particle responsible for the outcome of whole universe. The Science starts with its theory of Big Bang as the beginning of the whole universe. But the very question of the origin of the Big element is still not answered (Mohammad Shafiq Khan, 2010). After all from where such a huge mass has come into its being. In recent past, scientists conducted an experiment known as Large Hydron colloidal but the outcome has not been positive at all.

Where is the erring mistake left?. The mistake is in the hypothesis of finding each and every substance in its particle form. The fact is that the real source of all the elements (atoms) in the whole universe is not in the particle form at all. The answer lies in the Hindu mythological setup. There are five Maha (Greatest) entities worshipped in Hinduism. These are the basis tatva of the whole universe. Those are namely: Ganesh Tatva, Shakti Tatva, Shive Tatva, Brahma Tatva and Vishnu Tatva. Each and every structure of the atoms is composed of all the five original tatva mentioned herein above.

Out of all the above five, Ganesh Tatva and Shakti Tatva are not in the particle stage and they are the root cause of creation of other three particle stages namely Shive, Brahma & Vishnu Tatva. Ganesh and Shakti Tatva are in *Chetan* Stage not in *Jar* state. Anything in particle form is Jar not in Chetan stage. Hence, both tatva give birth to another three particle stages symbolizing Shive mean Mahashiv, worshipped for all the activeness, movement (cosmic dance- Tandav) and the destruction. It is only electron which resembles the kinetic form of Maha deity Shiv. Brahma, the ether component making space for the accommodation of these particles is also essential for

creation of other particle structure. Vishnu Tatva is the incarnation of Maha Diety Vishnu, symbolizing the Potential power of the atom. Shakti Tatva, the energy form is further divided into three basic forms and make the part of each particle as its anti-particle, giving energy as well making it in stable stage.

Each and every other element is nothing but the different combinations of all the five basic entities mentioned above. Hence, the Paramtatva or the Great element is a basic structure of all the five ingredients mentioned above. This is the sole cause of creation of the each and every particle in the universe.

God is nothing but the combination of all the five original Tatva doing its work of Generation, Operation and Destruction. It is mentioned in the Hindu Mythology that the God himself has manifested in Chetan and Jar and given birth to each and every structure in the universe. Hence, searching for the original particle is not at all difficult when you concentrate what is written in the books of Hindu Mythology. That is why there is a saying that God reside in each and every particle of the universe. Then why one has to fight for the differences of religions, caste and creed?
